

## P03 React, Ionic

1

Create a React app that displays a list of results for a query to your project's service.

Avoid class components. Remember:

### Pitfall

We recommend defining components as functions instead of classes. [See how to migrate.](#)

Source: <https://react.dev>

2

Make some experiments with Ionic. Try these installation types:

- Using CDNs, app should run without further installation  
<https://ionicframework.com/docs/intro/cdn#ionic-framework-cdn>
- Ionic with React  
<https://ionicframework.com/docs/intro/cdn#ionic--react>

Create a page with text, buttons, input elements and/or other components.
