

P10: iTunes II

Continue working on your iTunes app:

- Retrieve the data from the following URL:
<https://itunes.apple.com/search?term=rolling+stones&entity=album>
- Implement a `SearchBar` that can be used to search for other artists (see URL). You could use a `TextField` with either a button to trigger a new search or the `onSubmit` modifier. Alternatively, there is a `searchable` modifier. Note: You need to encode the search term, check out the method `addPercentEncoding` for Swift strings.
